K-1280 AXLE SHAFT REMOVER

Makes Axle Shaft Removal Faster, Easier, & Safe

Removing drive axles is often frustrating & time consuming. It is usually done by hammering on the axle flange with a sledge or air hammer. This method is slow and often results in damaged studs which must be removed and replaced. In addition, flying pieces of the axle flange can cause serious injury.

NOW THERE IS A BETTER WAY!

The K-1280 is supplied with two stud adapters for 5/8 - 18 studs. Additional stud adapters are available as shown or as a kit.

(Part # K-1282)

DTI Price:
\$109

Stud Adapters

The patented K-1280 is a rugged tool made of special heat-treated steel. Installs in less than a minute. Eliminate damage to hub & studs.

- Specially heat-treated alloy drive pin provides large, easy to hit target that extends well beyond the wheel.
- Speeds the removal process by allowing the mechanic to hit harder and with greater accuracy.
- Spring-loaded drive pin maintains contact with axle flange.
- It's a rugged, yet lightweight tool that installs in less than a minute.

**Accommodates all
Rockwell & Eaton Axles**
